Water soluble fertilizers with nitrification inhibitor

+3

- More Nitrogen for the Plant
- Less Leaching of Nitrate
- Better for the Environment
Water soluble fertilizers with nitrification inhibitor

What is DeltaLent Technology?

Problem:
Nitrate (NO₃⁻) is subject to leaching in soil

Solution:
DeltaLent delays the conversion of ammonium (NH₄⁺) to nitrate (NO₃⁻)

Result:
DeltaLent reduces nitrogen losses and results in more available nitrogen for the plant!

Benefits:
- Stabilized ammonium nitrogen: reduced nitrogen losses and more plant available nitrogen
- Less nitrate accumulation in the crop
- Improved crop quality due to partial ammonium nutrition
- Highest purity and solubility
- For all fertigation technologies (drip, centre pivot, sprinklers etc.)

Complete range for all crop stages
